

Your education. One next step.

The supplied reference guides the warm canvas, rounded rail, pastel subjects, and lighter type. All activity history, answers, points, and workout loads in these boards are illustrative.

Static review: follow the numbered artboards. The available Paper integration has no hotspot or transition API. Arrows describe the intended journey; buttons do not run the app.

O1 / THE COMPLETE LESSON

O2 / VOICE PRACTICE

O3 / YOUR PLAN

Shorter day: D19 / M20 → lesson. Return: D20 / M21 → a 20-minute start + undo.

53 product artboards

Learning plan: D12 / M12 · Growth: D13–14 / M13–15 · Progress: D15 / M16 · Reflection: D21 / M22

Quiet when it should be. Clear when it matters.

Touch, keyboard & focus

Primary buttons are 52 px tall. Every interactive target must have a 44 × 44 px hit area, including text links and compact chips. Tab follows rail → main task → context. Enter activates; radio groups use arrows. Escape closes a tutor or source panel and returns focus to its trigger.

Motion with a purpose

Use 160–200 ms fades with at most 6 px of movement for new steps. Keep scroll and answer position. Selection and save feedback take 120 ms. With reduced motion, switch states immediately and replace the voice waveform with a static microphone status. No confetti, count-up points, or looping decoration.

Readable across sizes

DM Sans: 16–18 px body, 14 px secondary controls, 32–40 px mobile headings, 44–60 px desktop headings. Dark text and explicit labels accompany pastel categories. At 200% text zoom, content reflows and scrolls; fixed controls must never cover answers. Tablet folds the context panel into a drawer.

Save, resume & adapt

Save drafts without advancing the lesson. Show saving, saved on this device, and synced states separately. After a miss, move essential future work and drop optional work with an explanation. Undo restores future scheduling without deleting attempts. A tutor-assisted attempt cannot earn independent mastery.

Voice, offline & mobile PWA

Microphone access starts only after Start conversation. Denied access offers the same scenario in text. Pause preserves the session; End closes it. Reconnect must be explicit after an interruption. Saved lessons can be read offline; new AI and voice need internet. Treat suspended iPhone calls as interrupted. Install and reminders require user actions.

Implementation follows design approval. Supabase account isolation, actual AI generation, GPT-Live transport, push, offline writes, keyboard behavior, and motion are not functioning inside these Paper boards.

Small details, kept visible.

Account boundaries

Nathan and Patrick have independent accounts and imports. Plan previews never use the file’s user_id as ownership. No shared progress, public rankings, or admin visibility into another learner’s history.

Memory you control

Settings exposes saved goals, preferences and conversation summaries with edit, forget, export, and delete. Raw audio is off by default. Transcript retention requires a separate choice.

Cost & unavailable states

Keep model choices configurable. Evaluate GPT–Live from current official documentation after approval. When a quota or provider fails, explain it and preserve saved work. The \$25–\$75 monthly envelope remains a planning target, not permission to purchase.

Edge–state routes: M24 offline · M25 installation · M26 microphone denied · M27 incomplete import · M28 tutor · M29 milestones · M30 sources · M31 morning check–in.

Long content scrolls. Short Today stays focused. Desktop screens are 1440 px; mobile screens are 390 px. The same account data underlies both layouts when implemented.
