Progress

A sale today. Cash later.

A small creative studio

Work sold this month

\$8,000

Cash received

\$2,000

Costs due this month

\$5,000

A sale and its payment can happen at different times. Profit alone doesn't tell you what is in the bank.

Make your call →

[Show source](#) · [SEC financial statements ↗](#)

[← Lesson](#)[Save & exit](#)

Finance · Week 1

2 / 5

What would you check first?

Before recommending a fix for the studio, choose what you need to know.

☒ Opening cash and payment dates☐ How much more work it can sell☐ Whether revenue grew last month

Why that one?

The invoices don't tell me what's in the bank. I need the starting balance and when the bills are due.

[Check my reasoning →](#)[Ask your tutor](#)

You found the missing information.

Independent attempt

You separated the sale from the payment.

The \$3,000 gap in this month's cash movements is useful. The opening balance tells you whether it becomes a payment problem.

One useful next step

Ask when the outstanding \$6,000 will arrive, then compare it with the bills' due dates.

[Try a changed situation →](#)

[Revise my answer](#)

Same idea. Different business.

A CATERER · FICTIONAL CASE

A client pays a \$4,000 deposit today for an event next month. Ingredients will cost \$2,500.

Does cash in the bank mean it is all profit?

No. The caterer still has to deliver the event and cover its costs. I'd check the remaining expenses before calling it profit.

Save my practice →

Your later review will check this in a new context.

A useful piece of work. Saved.

**+25 points**

Profit versus cash

You explained cash timing and checked what information was missing.

Saved to your private progress
